Office Action Summary

Application No.

10/041,836

Applicant(s)

TOWNSEND, MARSHALL O.

Examiner

Nini F. Legesse

Art Unit

3711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 August 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 12 and 29-41 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 12 and 29-41 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

Art Unit: 3711

DETAILED ACTION

Applicant's response to the office action of 06/01/05 is acknowledged on 08/15/05.

After careful review of the allowable subject matter indicated in the last office action, the finality of the action is withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12, 29-34, 36, 37, and 39-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baxstrom (US Patent No. 4,915,387) in view of Strande (US Patent No. 6,949,029).

Art Unit: 3711

Baxstrom teaches a template (22) having a top and bottom and a graphic design (see figures 1-3) attached to the template. The graphic design depicting a "plurality of club path indicators" (34), a "swing reference guide" (RF, FR2A, RF2B, LF, LF2; see column 4, lines 1+), and a "link" (see column 4, lines 59-64 and column 7, lines 4-12).

Regarding the swing reference guide, in as much set forth by applicant in the claim, this guide clearly establishes "shot" selection types. Club selection is synonymous with "shot selection." For example, if a low loft shot is needed, a low number iron is used, such as a 3 iron. If a high loft shot is need, a high number iron is used, such as a 9 iron. In the alternative, see elements 30 and/or 32 that may also be considered a "swing reference guide" which define a plurality of shot selection types. For a regular loft shot, a golfer would place the golf ball relative to element 30. For a lower loft shot, the golfer would place the golf ball relative to element 32 (see column 4, lines 31+; see also column 7, lines 50-52). It can be argued that Baxstrom does not disclose the specific arrangement and/or content of indicia (printed matter) set forth in the claim. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the markings as claimed since it would only depend on the intended use of the assembly and the desired information to be displayed. Further, it has been held that when the claimed printed matter is not functionally related to the substrate it will not distinguish the invention from the prior art in terms of patentability. *In re Gulack*, 217 USPQ 401, (CAFC 1983). The fact that the content of the printed matter placed on the substrate may render the device more convenient by providing an individual with a specific type of instruction does not alter the functional relationship. Mere support by the

Art Unit: 3711

substrate for the printed matter is not the kind of functional relationship necessary for patentability. Thus, there is no novel and unobvious functional relationship between the printed matter e.g. reference guide and the substrate e.g. template/mat that is required for patentability. Reference characters 34 clearly denote a "primary" club path. Element 30 is a club face angle indicator (see column 7, lines 17+). In as much structure set forth by applicant in claim 36, any of the corners of the template may be grabbed to allow an individual to move/carry the template, thereby inherently defining a "handle." It is clear that Baxstrom fails to disclose a tee bore extending through the template and a tee slot. However Strande teaches the use of a tee bore and a tee slot on a golf-training device (see element 64 on Fig. 1). It would have been obvious to one of ordinary skill in the art to provide the Baxstrom device with a slot as taught by Strande in order to simplify the manufacturing process of the device.

In addition, each of the above claims is rejected with Baxstrom in view of Gibbs et al. (US Patent No. 1,484,390) and Strande (US Patent No. 6,949,029).

Gibbs discloses an instruction chart for playing golf comprising: a template (see Fig. 2), the template having a top and a bottom, a graphic design attached to the template, the graphic design depicting a swing reference guide comprising a plurality of shot selection types (here a "brassie" shot, see Fig. 1 for a drive, Fig. 3 for a "mid-iron" etc); a link between each one of the plurality of shot selection types and one of the club path indicators (11, all the instructions that are shown on the template could be considered as links); and a foot (for example 2 and 3) and ball position indicator (7). It is obvious to

Art Unit: 3711

employ Gibbs to provide further instructions of performing a specific shot. In so doing, the instructions would be coded as is already suggested in the Baxstrom reference. It is clear that Baxstrom fails to disclose a tee bore extending through the template and a tee slot. However Strande teaches the use of a tee bore and a tee slot on a golf-training device (see element 64 on Fig. 1). It would have been obvious to one of ordinary skill in the art to provide the Baxstrom device with a slot as taught by Strande in order to simplify the manufacturing process of the device.

Claim 35 is rejected under 35 U.S.C. 103(a) as being unpatentable over the reference as applied to claim 12 above, and further in view of Long (Us Patent No. 5,273,285).

Baxstrom fails to disclose the use of an ultraviolet protective layer in his device. On the other hand, Long discloses the use of an ultraviolet protective layer in his device (see column 3 lines 65-68). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the Baxstrom device with an ultraviolet protective layer as taught by Long in order to prolong the life of the device by protecting it from sun damage.

Claim 38 is rejected under 35 U.S.C. 103(a) as being unpatentable over the reference as applied to claim 12 above, and further in view of Florian (US Patent No. 6,156,396).

Art Unit: 3711

Baxstrom fails to disclose a laminated template. On the other hand, Florian teaches a laminated golf practice mat (see column 2 lines 1-3). It would have been obvious to one of ordinary skill in the art at the time the invention was made to laminate the Baxstrom device as taught by Florian in order to provide an anti-friction layer that is durable.

Response to Arguments

After careful review of the allowable subject matter indicated in the last office action, the finality of the action is withdrawn.

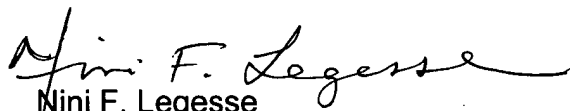

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nini F. Legesse whose telephone number is (571) 272-4412. The examiner can normally be reached on 9 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Kim can be reached on (571) 272-4463. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
